

CP Targets Discussion

January 16, 2025

Proprietary & Confidential

Integrated Payables and AP Automation are most logical, attractive extensions from our current offering

	Nearest to current capabilities Furthest from current capabilities			
	1 Integrated Payables	2 AP Automation	Expense Management	AR Automation
Description	"Payment file handling" – economic, efficient disbursement of payments for corporates	"Pay Out" – value chain extends from invoice processing to payment management and execution	"Manage spend" – filing, claims processing, and disbursement (incl. payment of expense)	"Pay In" – billing and collections + cash applications (incl. processing of payments)
Benefits				
SW-like capabilities				
Fit for WEX				
Cross-sell potential				
Market oppty				
Other Benefits	"No regrets" capabilities our customers are asking for today; acquisition would augment / replace our build here	Long-term, sustainable / defensible path likely requires expanding beyond Payments focus into Software workflows	Best answer for why WEX is "better together", and may be most digestible by the Street	Could unlock value from owning both pay-in and pay-out solution, with potential future upside of building out closed loop network
Drawbacks	Likely the least "sticky" of these options, potential for value prop to erode over long-term	- Competitive space with newer, well-funded entrants - Increases conflict with Embedded customers (e.g., Acuity)	- Crowded space with low margins - Req's corporate card investments to capture full opportunities	Realizing full benefits would likely require an additional acquisition in pay-out
	In-process			
	customers (Emburse, Divvy)			
Interest Level	High	High	Partnering may be more attractive means of accessing this space	Low

Example AP Automation / Integrated Payables targets

Company	Metrics	Description	Rationale / Implications
 Public	● Rev: \$450M ● EBITDA: \$75M (15%)	● SaaS-based, end-to-end SW and payment platform that digitizes + automates workflows ● \$76B TPV and 75M transactions across 8,000 buyers, 1.2M suppliers	<i>Benefits</i> ● Makes WEX AP automation robust t and establishes us as a leading player ● Doubles size of WEX CP segment, strength in mid-market ● Material margin pickup from our payments infrastructure <i>Drawbacks</i> ● Potentially prohibitively expensive (though stock is depressed) ● Does not expand us beyond our current markets
 Family Owned, Bregal Sagemount Process Launch Q1-25	● Rev: \$155M ● EBITDA: \$44M (28%)	● AP auto., AR auto., and procurement ● Started in fleet solutions	<i>Benefits</i> ● Complementary to current customer base, and expands key capabilities most notably in AP automation ● Could accelerate our fleet solutions (data analytics, non-fuel purchases) <i>Drawbacks</i> ● Likely "lighter" capabilities that would require additional WEX build on top ● Highly acquisitive to expand solutions / capabilities, may not be fully integrated and/or could add complexity vs. "primarily build" options ● May expand us more broadly than desired, or include less-attractive assets/markets
 Privately held, IPO aspiration	● Rev: \$200M ● EV: \$8B ● Raised: \$740M	● Cloud-based AP auto, focused on eliminating mass payment workload ● Includes Expense Mgmt.	<i>Benefits</i> ● Expands WEX into both AP Auto. and Expense Management via one acquisition ● Expected strength all the way to procurement, via Approve.com acquisition in 2021 <i>Drawbacks</i> ● Expense Management solution was built, not bought – may be lighter-featured as a result, though integrates well with existing tech ● Price-prohibitive at current valuation (though dated, based on last round in 2021)

Example AP Automation / Integrated Payables targets

Company	Metrics	Description	Rationale / Implications
 Public, carveout	'23 Rev: \$38M (~13% of enterprise revenue) '22: \$43M '21: \$34M	- Full Integrated Payables - New technology stack - Unlike rest of Repay - Working to expand into broader AP	<i>Benefits</i> - Current customer, proven we can plug in our processing capabilities and drive growth - Rounds out of Integrated Payables capabilities, obviating otherwise critical builds <i>Drawbacks</i> - Strength is in Integrated Payables, less robust capabilities and traction in broader AP Automation that we find more valuable - Enterprise operating at a loss (though relevant Business Payments portion of business may be profitable)
 Public, carveout	- Rev: \$80M - CSI acquisition in 2019 (\$600M)	- Focused on combining suppliers' invoice processing and payment automation - Integrated payables strength in industries similar to WEX	<i>Benefits</i> - Track record of vertical expansion via product fit/specialty and business dev. - Edenred CSI acquired Invoice Payment System (2022) to expand beyond purely Integrated Payables to invoice automation (capture to approval) <i>Drawbacks</i> - Core offering still more Integrated Payables-focused than broader AP Auto. players "Complementary solution", may have received less investment than other segments
 Vista, 2024	- Rev: \$300M - EBITDA: \$125M (40%)	- E2E solution for procure-to-pay - Large market focus - Supplier / supply chain management - European strength	<i>Benefits</i> - Extends us along value chain to procurement, supplier management - Helps us better serve existing (and future) customers' needs by solving wider range of related challenges <i>Drawbacks</i> - Vista just purchased from Cinven in 2024 - Could still require us to strengthen our AP automation capabilities beyond Jaggaer's focus in the value chain

Example AP Automation / Integrated Payables targets

Company	Metrics	Description	Rationale / Implications
 Marlin, 2017 Advent, 2022	● Rev: \$150M ● EBITDA: \$15M (10%)	● Cloud-based AP invoice automation ● Recently acquired expense management capabilities (Expensya) ● European based ● Trying to enter the US market, but so far limited success	Benefits ● Covers both AP automation (more robust) and EM expansion for WEX, as well as procurement management ● Material sector overlap with WEX (construction, transportation + logistics) ● Within our price range comparatively (~\$500M valuation) Drawbacks ● Potentially smaller-scale asset vs. ideal target ● Strong footprint and brand in Nordics, but less traction and recognition in US to date
 Private	● Raised: \$150M ● TPV: >\$20B	● AI-powered AP automation (invoice automation, payment management + execution) ● Expense management and corporate card offered	Benefits ● Heavily AI/ML driven, aligns with WEX priorities and could accelerate our AI capabilities within CP ● Able to expand in both AP Automation and Expense Mgmt via one acquisition ● Potentially above-market re: integrations with ERPs and other solutions Drawbacks ● Even if price isn't prohibitive, valuation may be overly aggressive given revenue ● May be smaller-scale, acquisition would be for capabilities vs. customer base
 Private	● Val: \$1.8B ● Raised: \$680M	● Full spectrum offering, from digital AP to AR ● Working capital access	Benefits ● Extends across both AP and AR via single acquisition ● Strong execution via partnership model, which could benefit WEX more broadly (vs. direct sales, where other comps may be stronger) Drawbacks ● Not profitable in a competitive market segment ● Potentially higher churn than others in this space (according to former leader)

Expense Management market summary

Example Expense Management targets (1/3)

Company	Financial	Description	Rationale / Implications
 Public	● Rev: \$200M ● EV: \$500-600M	● Simplify expense collection, processing, audit, and reimbursements ● Offers corporate cards (physical + virtual) ● Horizontal solution focused on SMB / MM	<i>Benefits</i> ● Stickier SaaS-based solution that is well-positioned in the market ● Expands WEX value prop with Direct customers ● Drives us toward convergence of software (Expensify revenue is primarily SaaS-based) and payments (interchange model being built on Expensify cards) <i>Drawbacks</i> ● Asset is not profitable (but is not overly-consuming cash) ● Could be challenging for WEX to onboard, underwrite, manage, and issue corporate cards in a market-competitive manner ● Fits with SMB focus in Mobility, but limited success cross-selling into segment
 Private	● Raised: \$200M ● EV: >\$500M	● Full-service digital banking, targeted toward entrepreneurs ● Expense management solution includes corporate cards (physical + virtual) ● Also includes AP Automation and lite-banking solutions like treasury, commercial banking	<i>Benefits</i> ● Robust digital capabilities to accelerate our software capabilities ● Augments our AP Automation offering while expanding WEX into Expense Mgmt <i>Drawbacks</i> ● Includes capabilities less of interest to WEX (growth capital management, digital banking for startups) ● Customer sweet spot (startups) are not strategic for WEX and have minimal/zero overlap with current customer base
 K1, 2019; IPO ambition	● Rev: \$250M ● Margin: 20% ● EV: \$2B	● T&E and broader spend management ● Includes AP Automation capabilities ● Flexible expense policy management and reporting / analytics ● Virtual corporate cards (not physical)	<i>Benefits</i> ● Broader solution set that fits well with WEX capabilities, allowing us to improve our AP offerings and expand into EM in one acquisition <i>Drawbacks</i> ● PE-backed roll-up of 6+ platforms, could have high tech. complexity ● Large organization (1,000 FTEs) could be hard to operationally ingest

Example Expense Management targets (2/3)

Company	Financial	Description	Rationale / Implications
	● EV: \$520M ● Raised: \$110M	● AI-powered platform to automate expense processing from Spend to the General Ledger ● Dynamic, streamlined approval workflows, real-time spend visibility, and insight generation ● Corporate cards incl. physical (MA)	<i>Benefits</i> ● AI-driven solution fits with WEX strategic priorities and could inform our approach to AI products ● Focus industries include construction and field services, which aligns well with our Mobility customer segments <i>Drawbacks</i> ● Narrower EM focus would require us to continue to build out AP Automation capabilities to serve Tech Partner and Direct needs ● Corporate card management could be a challenge to do competitively
	● Rev: \$25M	● Global expense management platform serving over 130 countries ● Smart workflows and insights ● Robust local compliance and legal risk mitigation capabilities ● Corporate cards incl. physical (V)	<i>Benefits</i> ● Larger TAM, as international T&E focus expands TAM from US to Global ● Potential fit with WEX international (esp. Europe) footprint today ● Integrations (Egencia, Workday) partially offset smaller scale <i>Drawbacks</i> ● Minimal overlap with current customer base (WEX Direct is US-focused) ● Acquired by PE (Marlin) in Sept. 2024, so likely not actionable for 2+ years ● Likely not profitable, and sizeable org (300 FTEs) given small top-line
	● EV: \$1B ● Raised: \$235M	● Robust expense management tools incl. physical cards ● Likely lite-version of AP automation software and procurement	<i>Benefits</i> ● Broader solution set that fits well with WEX capabilities, allowing us to improve our AP offerings and expand into EM in one acquisition ● Large customer base across 30 counties (concentrated in US + Europe) <i>Drawbacks</i>

Example Expense Management targets (3/3)

Company	Financial	Description	Rationale / Implications
 spendesk	● EV: \$1.1B ● Raised: \$275M	● Spend management platform, including physical cards ● Accounting products and support / integrations ● Moderate procure-to-pay and AP automation (mainly, invoice management) offerings	<i>Benefits</i> ● Robust digital spend management offering with strong tech. in EM ● Branching into AP Automation and procure-to-pay broadens benefit to WEX <i>Drawbacks</i> ● Given valuation, price may be prohibitive ● Potentially less-strong solutions outside of EM, but could be built on
 Teampay	● EV: \$175M ● Raised: \$95M	● Spend management and real-time tracking for finance teams ● Includes AP Automation (invoice processing and PO management) and procurement ● Corporate cards (incl. physical)	<i>Benefits</i> ● Spans areas of value chain we are most interested in (EM, AP Automation, and procurement) ● Size may be in sweet-spot with real commercial traction + customer base <i>Drawbacks</i> ● True strength appears to be in purchasing and procurement, rather than Expense Management (or AP Automation) ● Recently acquired by PayStand, likely off the market
 soldo	● Raised: \$265M	● Spend management platform, including physical corporate cards ● Includes management of subscription and advertising spend ● Offers fuel cards (open-loop)	<i>Benefits</i> ● Spend management across a large, European-focused customer base (>25,000) ● Potential to adapt fuel card tech. to support our fuel and non-fuel spend ambitions (though likely limited fuel-specific value for us to buy) <i>Drawbacks</i> ● Less well-known / well-covered name may indicate less relevant market player ● Focus on smaller end of market (including startups and non-profit) not the ideal segment fit for WEX

To be deleted

Executive Summary

Previously, we have discussed with this group our intention to continue moving closer to the intersection of software and payments, becoming further embedded in our customers' workflows by doing so

These materials provide an update on our progression toward that goal, as well as potential avenues to accelerate or expand our path forward

In Embedded / Tech Partner:

- We have high conviction in investing in this business, based on the attractiveness of the market opportunity and the assets we can bring to bear in pursuit
- We're gaining momentum across our product launches and commercial efforts, and have positioned our GTM to continue building on this traction

In Direct-to-Corporate:

- We continue to grow this business and are enhancing our Direct offering, adding capabilities and making our solution simpler and easier to use
- That said, we are only able to fulfill a narrow portion of our customers' AP-related needs; we're building to enhance our capabilities here, but an acquisition in this space could substantially expand our capabilities and improve our value prop

Corporate Payments is composed of five subsegments; our focus today is on Embedded (Tech Partner) and Direct

	Travel	Embedded / TP	Direct-to-Corporate	FI	Bill Pay
Description	Virtual card offering primarily for online travel agencies (e.g., Expedia) to issue payments to their suppliers (mainly hotels)	B2B2B: We primarily provide virtual card payments solutions for FinTechs, who in turn provide to their end customers as part of their offering	B2B: Payment management solution used directly by US mid-market corporate customers, primarily for making virtual card payments to their suppliers	Payment management solution used by core banking tech platforms to pair with their treasury banking capabilities in order to offer an AP solution for US corporates	Embedded integration with core banking software providers to offer integrated payment distribution (via virtual card) to end customers
Primary Customers	Online Travel Agencies (OTAs), Wholesalers, Travel Mgmt. Companies	Software providers and FinTechs; insurance / warranty	Mid-market corporations across industries	Mid-sized banks	Core banking tech platforms; select direct billers
2024 Revenue (19-24 CAGR)	\$XM (Y%)	\$45M (Y%)	\$54M (Y%)	\$XM (Y%)	\$XM (Y%)
Example Customers	  	  	 	  	 
	Aggressively executing on strategy	Focus of today's discussion		Pursuing re-orient strategies, including positioning for potential sale	

Our strong core platform drives our position in Embedded (and Travel), and sets our foundation for Direct

We are moving toward software layers in Embedded and Direct, making our products stickier and more valuable for our customers

Embedded | Reminder – we view the opportunity to grow via our Tech Partners as compelling, “no regrets”

Market opportunity is compelling

Relevant spend volumes are growing >20-25%*...

- > 20% p.a. proj. Payables volume growth
- Expect additional new spend categories to emerge, driving further incremental growth

...more than offset expected take rate decline if we are able to modestly increase our market share

- Can accelerate TPV growth via share gain w/ leading logos who are outpacing market growth

Strong Foundation to Pursue and Capture Opportunity

Highly attractive economics for our CP customers

- Unlocked by our scale and advantaged scheme economics from our Travel business

Additional revenue opportunities are high-margin; incremental volume is highly attractive

- Incremental revenue converts to OI at a very high rate

Existing Travel capabilities highly overlap with what is required to win in Tech Partner; 2025 investments aimed at closing remaining “gaps”

- Robust, compelling foundational solution

Building these capabilities also support our efforts in Direct (and potentially Mobility cross-sell)

Embedded | We are seeing momentum in our products, driving toward launches that meet the needs of key prospects like BILL

Direct | Traction to date has been built on our advantaged virtual card economics and our commercial efforts

Our sales team has succeeded despite a value prop limited primarily to economics, though we are investing to ~~augment...~~

Go-to-market

- Grew our sales team from X to Y (from Year X to Year Y) to pursue and capture market opportunity
- Investing additional in headcount in '25 to continue momentum

Investing in product enhancements

- Improved UX to streamline customer workflows
- Flexible funding and plastics
- Mobile payment capabilities
- Modern ERP integrations
- Exploring cross-sell of partner-enabled products (FX)

...to continue building on our strong track record of growth in the Direct-to-Corporate segment

Sales engine has driven growth to date, but value prop enhancements (via build, partner, and/or buy) are needed to win longer-term

Direct | Acq. in AP Auto. moves us closer to customer workflows + software layer, increasing long-term sustainability of this business

Corporate Payments Adjacencies and Acquisition Rationale

	Nearest to current capabilities Furthest from current capabilities			
	Integrated Payables	AP Automation	Expense Management	AR Automation
Description	"Payment file handling" – economic, efficient disbursement of payments for corporates	"Pay Out" – value chain extends from invoice processing to payment management and execution	"Manage spend" – filing, claims processing, and disbursement (incl. payment of expense)	"Pay In" – billing and collections + cash applications (incl. processing of payments)
Example logos		Double click on following pages		

AvidXchange boasts strong Integrated Payables capabilities and a software solution that is embedded in customers' day-to-day

Target Overview

- Founded in 2000, HQ in Charlotte, NC
- IPO in 2021 at \$25 per share; has hovered around \$10 for past two years
- Vertical expertise in real estate, construction (via Core Associates acquisition), financial svcs, and healthcare
- In 2023, processed:
 - \$76B in total payment volume and 75M transactions, across
 - >8,000 buyers and >1.2 million suppliers

Main offering + value prop

AP Automation Software

- SaaS-based solution automating and digitizing the capture, review, and payment of invoices across modalities
- Digitally captures invoices from suppliers and applies buyers' rules to enable processing

AvidPay NW

- Two-sided payments network connecting buyers + suppliers
- Supports virtual card, ACH, and check payment methods

Supplier Hub

- Provides suppliers insights + visibility to their cash flow and payments
- Allows Avid to monetize + increase engagement in AvidPay network

Strategic benefits + drawbacks

Benefits

- Improves WEX solution considerably, with market-leading Integrated Payables offering on Day 1 and strong broader AP Automation capabilities
- Doubles size of WEX CP segment, adds strength in mid-market, and reduces segment volatility via dispersed rev.
- Material margin pickup from our payments infrastructure

Drawbacks

- Potentially prohibitively expensive at ~\$2.5B (though stock price has been depressed)
- More focused on Integrated Payables than other AP Automation players that are more software-first in approach

Avid pursues a vertical and horizontal strategy

	Real Estate	CAM	Construction	Financial Services	Media	Healthcare	Social Services	Education	Hospitality

Corcentric offers broader solution set (AP and AR), with historical specialty and focus on fleet solutions

Target Overview

- Founded in 1996, HQ outside of Philadelphia, PA
- Formed SPAC to go public in 2022 (at \$1.2B EV), but deal fell through
- Strength in transportation (driven by fleet solutions), but serves range of industries incl. manufacturing, distribution, healthcare, and F&B
- For 2024, projected:
 - \$155M revenue, \$255B transaction volume across
 - 2.5K customers, 575K buyers, and 360K active suppliers

Managed AR (Order-to-Cash, 25% of rev.)

- Invoice automation, credit decisioning, dispute and collections management, trade financing, and cash application

Fleet Solutions (40–45% of rev)

- Capital equipment financing, data analytics
- Fleet GPO: proprietary mktplace for Maintenance purchasing

Managed AP (Source-to-Pay, 25%)

- AP workflows (invoice process) and payments (execution, fraud)
- Procurement: requisition-to-PO
- Contract lifecycle management

Implement. / Managed Svcs. (5–10% of rev.)

- Advisory, consulting, and implementation
- SW Licensing + Administration

Strategic benefits + drawbacks

Benefits

- Expands WEX capabilities into both AP and AR Automation via one acquisition
- Complementary to Mobility customer base
- Could accelerate our Fleet solutions (data analytics, non-fuel maintenance via Corcentric proprietary marketplace)

Drawbacks

- Highly acquisitive to expand solutions suite, may not be fully integrated and could add integration complexity
- Smaller portion of revenue from AP may indicate lighter-caliber solution
- May expand us more broadly than desired (.e.g, into AR) or include less-attractive assets / markets

Vertically-focused AP market summary

Key Sectors

Logistics / Freight

Differentiate through strong partnerships with vendors and feature-rich, industry-specific platform

Potential customer + supplier network overlap with WEX Mobility

Construction

Differentiate via strong network of subcontractors and ability to create and exchange lien waivers

AP auto. buyers + supplier network could overlap with Mobility

Healthcare

Differentiate via products that ease navigating the complex payer, provider, patient system and ensuring regulatory compliance

Potential supplier network overlap with Benefits

Real Estate / Utilities

Differentiate via invoice reconciliation with resident activity and ability to capture miscellaneous charges (e.g., late fees)

Supplier network in Utilities could overlap with Bill Pay

Hospitality

Differentiate through strong network of specialty vendors and navigating tiered distribution networks / regulation (e.g., alcohol)

Minimal customer or supplier overlap

SAM a portion of overall AP Auto, and difficult to pursue multiple verticals (esp. concurrently)

Strategic Implications

... Benefits

- Most proximate to our current (esp. Direct) business; could augment our Mobility offerings
- Opportunity to replace and consolidate significant portions of the existing tech stack, including UI
- Moves us further toward the convergence of software and payments

... Drawbacks

- Increases conflict with current Tech Partner / Embedded customers
- TAM limited by vertical, and most attractive ones for WEX may be most highly saturated or competitive (e.g., Construction)
- Requires investment to drive more robust GTM and sales engine to chase down long tail of industry-specific logos

AR Automation market summary

Value chain	Market Opportunity	Strategic Implications
Credit Order entry + mgmt Credit limits + risk Fulfillment Billing Invoice generation Invoice transmission Invoice approval Collections Collections Payment processing Cash applications Working capital mgmt. Core products + services	Lighter-touch to date per M&A team TAM \$1B – \$20B Greenfield Low – High Forward Growth (10%) – 40% EBITDA Margin (25%) – 40%	Benefits ● Owning both pay-in and pay-out can be highly attractive due to better economics; drives TPV by owning both supplier + buyer relationships ● Potential for considerable additional future upside via building out closed-loop networks ● Drives WEX further toward convergence of software and payments, closer to our customers' workflows ● Major portion of market served or driven by ERP providers, with lower- quality, older tech. solutions Drawbacks ● Incumbents (esp. ERPs) own customer relationship for large segment of the market, can be difficult to disrupt without significantly superior tech ● Further afield from our current set of solutions and tech stack ● Buyers / decision-makers typically different than our current AP automation purchasers

Direct | Traction to date has been built on our virtual card economics and our commercial efforts

AP Automation market summary

WIP

Direct | Corpay's acquisition of Paymerang in part reflects their desire to similarly extend along the AP Automation value chain

Through the acquisition of Paymerang, Corpay was able to simultaneously...

Expand to new verticals & capabilities

Paymerang provides Corpay with immediate access to new verticals, significantly expanding its TAM over \$7 billion.⁴

New Verticals included:

- Senior living :\$60M TAM
- Services: \$ 2.3B
- Nonprofit: Extensive
- Public sector: \$4.2B

Capture revenue and cost synergies

Corpay expects significant revenue and cost synergies, and per CEO Ronald Clarke, are already realizing synergies less than six months post deal closure

Corpay announced they expected Paymerang to contribute \$25-35M in the second half of 2024²

Extend their existing network

Expanded merchant portfolio by 250k more merchants (Corpay had ~1M prior)¹

Added 100+ integration partners⁴

Gain access to a key player in a limited pool

Of the 13 leading AP automation companies, 8 have either been acquired or reached a billion-dollar valuation⁴ leaving limited options and making the Paymerang acquisition more attractive¹
